

In the article "Treatment Satisfaction, Product Perception, and Quality of Life in Plaque Psoriasis Patients Using Betamethasone Dipropionate Spray 0.05%" by Fowler et al, published in the November 2017 edition of JCAD [*J Clin Aesthet Dermatol*. 2017;10(11):13–18], it has been brought to the attention of the publisher that incorrect versions of Figures 1 and 2 were inadvertently submitted to the journal. In the corrected versions (included below), a "%" symbol has been deleted from the Y axis labels of Figures 1A–D and the Day 14 (BSA >10%) column value has been changed from "82.0" to "83.0" in Figure 2C. The legend wording for both figures has also been revised (changes in yellow). The authors regret the error. **JCAD**

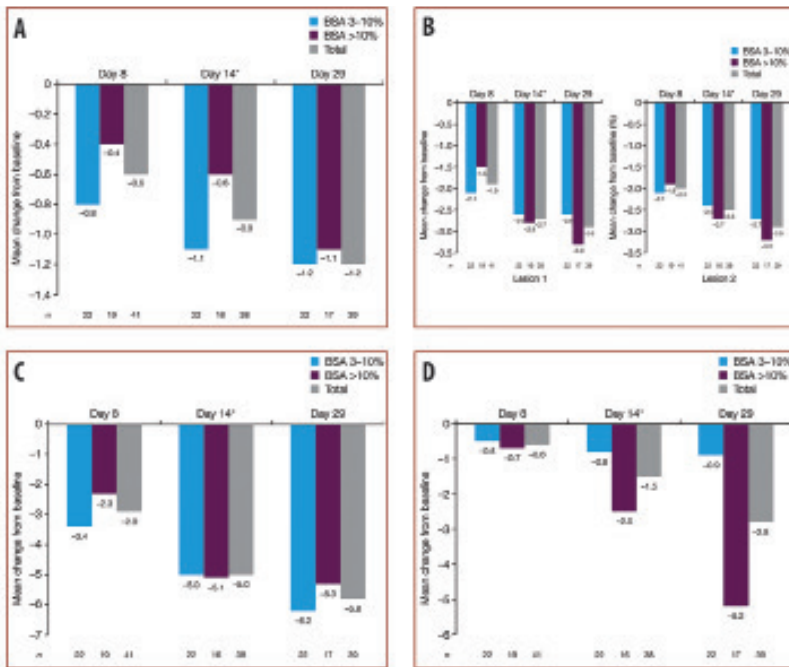

FIGURE 1. Change from baseline in A) Investigators Global Assessment (IGA) score; B) Total Sign Score (TSS); C) quality of life as measured by the Dermatology Life Quality Index (DLQI) and; D) percentage body surface area (BSA) involvement

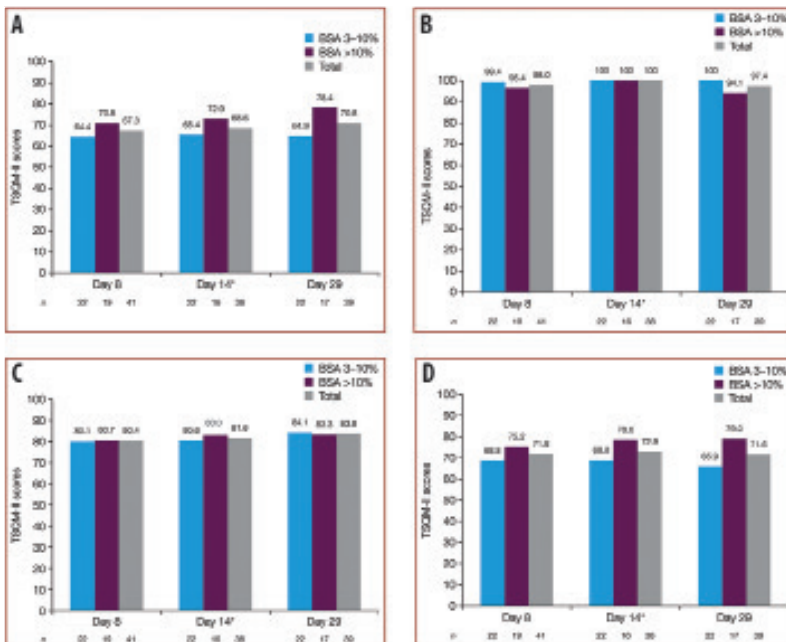

FIGURE 2. Treatment satisfaction scores for A) Effectiveness; B) Side Effects; C) Global Satisfaction; and D) Convenience
